

**Table of Contents:**

|                                                                          |    |
|--------------------------------------------------------------------------|----|
| Lecture 1 .....                                                          | 9  |
| Introduction .....                                                       | 9  |
| 1.1 Charles Babbage (1791-1871) .....                                    | 9  |
| 1.2 The Analytical Engine.....                                           | 9  |
| 1.3 Ada, Countess of Lovelace(1815-52) .....                             | 9  |
| 1.4 Course Contents & Structure .....                                    | 10 |
| Lecture 2 .....                                                          | 13 |
| Evolution of Computing .....                                             | 13 |
| 2.1 Turing Machine – 1936.....                                           | 13 |
| 2.2 The “Turing test” .....                                              | 13 |
| 2.3 Vacuum Tube – 1904:.....                                             | 13 |
| 2.4 ABC – 1939 .....                                                     | 14 |
| 2.5 Harvard Mark 1 – 1943:.....                                          | 14 |
| 2.6 ENIAC – 1946:.....                                                   | 14 |
| 2.7 Transistor – 1947 .....                                              | 14 |
| 2.8 Floppy Disk – 1950.....                                              | 14 |
| 2.9 UNIVAC 1 – 1951 .....                                                | 14 |
| 2.10 Compiler - 1952.....                                                | 15 |
| 2.11 ARPANET – 1969 .....                                                | 15 |
| 2.12 Intel 4004 – 1971 .....                                             | 15 |
| 2.13 Altair 8800 – 1975.....                                             | 15 |
| 2.14 Cray 1 – 1976 .....                                                 | 16 |
| 2.15 IBM PC – 1981 .....                                                 | 16 |
| 2.16 Apple Macintosh – 1984.....                                         | 16 |
| 2.17 World Wide Web -1989 .....                                          | 16 |
| 2.18 Quantum Computing with Molecules .....                              | 17 |
| Lecture 3 .....                                                          | 18 |
| 3.1 Browser .....                                                        | 18 |
| 3.2 URL.....                                                             | 18 |
| 3.3 What is a Web site?.....                                             | 18 |
| 3.4 What is Home Page of a web site? .....                               | 19 |
| 3.5 Who invented the Web & Why? .....                                    | 19 |
| 3.6 Future of the Web: Semantic Web.....                                 | 20 |
| 3.7 Useful Web page .....                                                | 20 |
| Lecture 4 .....                                                          | 21 |
| 4.1 Computer Types According to Capability.....                          | 21 |
| 4.2 Supercomputers .....                                                 | 21 |
| 4.3 Mainframe Computers.....                                             | 21 |
| 4.4 Servers / Minicomputers .....                                        | 21 |
| 4.5 Desktops.....                                                        | 21 |
| 4.6 Portables.....                                                       | 21 |
| 4.7 Ranking w.r.t. installed number.....                                 | 22 |
| 4.8 All computers have the following essential hardware components:..... | 22 |
| 4.9 Input Devices.....                                                   | 23 |
| 4.10 What is Port? .....                                                 | 24 |
| 4.11 Many Types of Ports .....                                           | 24 |
| 4.12 Processor.....                                                      | 24 |
| 4.13 Memory/Storage .....                                                | 24 |
| 4.14 Classifying Memory/Storage.....                                     | 25 |
| 4.15 Output Devices.....                                                 | 25 |
| 4.16 Modem.....                                                          | 25 |

|                                                      |    |
|------------------------------------------------------|----|
| Lecture 5.....                                       | 27 |
| 5.1 PC Parts.....                                    | 27 |
| 5.2 Inside of the CPU .....                          | 27 |
| 5.3 The Processor Module .....                       | 27 |
| Lecture 6.....                                       | 28 |
| 6.1 To develop your personal Web page .....          | 28 |
| Lecture 7.....                                       | 31 |
| 7.1 Microprocessor .....                             | 31 |
| 7.2 Integrated Circuits.....                         | 31 |
| 7.3 Devices.....                                     | 31 |
| 7.4 Microprocessor system.....                       | 33 |
| 7.5 Micro-controllers .....                          | 33 |
| 7.6 The Main Memory Bottleneck .....                 | 33 |
| 7.7 Cache .....                                      | 33 |
| 7.8 Microprocessors Building Blocks .....            | 34 |
| Lecture 8.....                                       | 39 |
| Binary Numbers & Logic Operations .....              | 39 |
| 8.1 Why binary .....                                 | 42 |
| 8.2 Boolean Logic Operations.....                    | 43 |
| 8.3 Truth Table for the XOR Operation .....          | 45 |
| 8.4 STRATEGY: Divide & Conquer.....                  | 45 |
| Lecture 9.....                                       | 47 |
| HTML Lists & Tables (Web Development Lecture 3)..... | 47 |
| 9.1 Single Tags .....                                | 47 |
| 9.2 Types of Lists .....                             | 52 |
| 9.3 Ordered List Types.....                          | 52 |
| 9.4 Useful URL .....                                 | 57 |
| Lecture 10 .....                                     | 59 |
| Computer Software.....                               | 59 |
| 10.1 Machine Language .....                          | 59 |
| 10.2 Language Translators.....                       | 59 |
| 10.3 Software Development.....                       | 59 |
| 10.4 Major Types of SW .....                         | 60 |
| 10.5 System SW are programs that ... ..              | 60 |
| 10.6 Operating System.....                           | 60 |
| 10.7 Utilities: .....                                | 61 |
| 10.8 Language Translators.....                       | 61 |
| 10.9 Device Drivers.....                             | 61 |
| 10.10 Application SW .....                           | 61 |
| 10.11 Another way of classifying SW .....            | 62 |
| 10.12 Who Owns Software? .....                       | 62 |
| 10.13 Main types of SW licensees .....               | 62 |
| 10.14 Proprietary SW License .....                   | 62 |
| 10.15 Freeware SW License .....                      | 63 |
| 10.16 Open-Source SW License .....                   | 63 |
| 10.17 Shareware SW License .....                     | 63 |
| 10.18 Trialware .....                                | 63 |
| Lecture 11.....                                      | 65 |
| Operating Systems .....                              | 65 |
| 11.1 Why Have OSes? .....                            | 65 |
| 11.2 Core Tasks of an OS .....                       | 65 |
| 11.3 OS Components .....                             | 66 |

|                                                          |    |
|----------------------------------------------------------|----|
| 11.4 Kernel .....                                        | 67 |
| 11.5 Types of OS'es .....                                | 67 |
| 11.6 Another Way of Classifying .....                    | 67 |
| 11.7 How many different OS'es are there? .....           | 67 |
| 11.8 Comparing Popular OS'es .....                       | 68 |
| Lecture 12 .....                                         | 69 |
| Interactive Forms (Web Development Lecture 4) .....      | 69 |
| 12.1 Server-Side Scripts .....                           | 71 |
| 12.2 Checkbox Input Element .....                        | 76 |
| 12.3 Radio Button Input Element .....                    | 77 |
| 12.4 Select from a (Drop Down) List .....                | 78 |
| 12.5 File Upload Input Element .....                     | 79 |
| Lecture 13 .....                                         | 81 |
| Application Software .....                               | 81 |
| 13.1 Two Major Types of Software .....                   | 81 |
| 13.2 Application Software .....                          | 81 |
| 13.3 Classification According to the Mode .....          | 81 |
| 13.4 Classification According to Application Area .....  | 81 |
| 13.5 Scientific/Engineering/Graphics Apps .....          | 81 |
| 13.6 Scientific SW .....                                 | 82 |
| 13.7 Engineering SW .....                                | 82 |
| 13.8 Graphics & Animation SW (1) .....                   | 82 |
| 13.9 Business Applications .....                         | 82 |
| 13.10 E-Commerce Software .....                          | 82 |
| 13.11 ERP (Enterprise Resource Planning) SW .....        | 83 |
| 13.12 DSS (Decision Support Systems) SW .....            | 83 |
| 13.13 Productivity SW .....                              | 83 |
| 13.14 Word Processors .....                              | 83 |
| 13.15 Web Page Development SW .....                      | 83 |
| 13.16 Spreadsheet SW (1) .....                           | 83 |
| 13.17 Spreadsheet SW (2) .....                           | 83 |
| 13.18 Presentation Development SW .....                  | 83 |
| 13.19 Small-Scale Databases SW (1) .....                 | 84 |
| 13.20 Small-Scale Databases SW (2) .....                 | 84 |
| 13.21 Productivity SW Suites .....                       | 84 |
| 13.22 Document-Centered Computing (DCC) - 1 .....        | 84 |
| 13.23 Document-Centered Computing (DCC) - 2 .....        | 84 |
| 13.24 Entertainment SW .....                             | 84 |
| 13.25 Music & Video Players .....                        | 84 |
| 13.26 Music Generation & Movie Editing SW .....          | 84 |
| 13.27 Games .....                                        | 84 |
| 13.28 Educational SW .....                               | 85 |
| 13.29 Electronic Encyclopedias .....                     | 85 |
| 13.30 On-Line Learning .....                             | 85 |
| 13.31 Interactive CD's .....                             | 85 |
| 13.32 Attributes of Good Application Software .....      | 85 |
| 13.33 Most Popular Application Software Categories ..... | 85 |
| Lecture 14 .....                                         | 87 |
| Word Processing .....                                    | 87 |
| 14.1 Word Processor .....                                | 87 |
| 14.2 Types: WYSIWYG-based & Markup-based .....           | 88 |
| 14.3 Desktop Publishing (DTP) .....                      | 88 |

|                                                                |     |
|----------------------------------------------------------------|-----|
| 14.4 Word Processors for the Web .....                         | 88  |
| 14.5 Let's try to use MS Word for creating a CV .....          | 90  |
| Lecture 15 .....                                               | 91  |
| More on Interactive Forms (Web Development Lecture 5) .....    | 91  |
| 15.1 Single-Line Text Input Field .....                        | 91  |
| 15.2 Password Input Field .....                                | 91  |
| 15.3 Hidden Input .....                                        | 91  |
| 15.4 Checkbox Input Element .....                              | 91  |
| 15.5 Radio Button Input Element .....                          | 91  |
| 15.6 File Upload Input Element .....                           | 91  |

## **Lecture 1**

### **Introduction**

#### **1.1. Charles Babbage (1791-1871)**

Creator of the Analytical Engine - the first general-purpose digital computer (1833)  
The Analytical Engine was not built until 1943 (in the form of the Harvard Mark I)

#### **1.2. The Analytical Engine**

A programmable, mechanical, digital machine  
Could carryout any calculation  
Could make decisions based upon the results of the previous calculation  
Components: input; memory; processor; output

#### **1.3. Ada, Countess of Lovelace(1815-52)**

Babbage: the father of computing

Ada: the mother?

Wrote a program for computing the Bernoulli's sequence on the Analytical Engine - world's 1st computer program

Ada: A programming language specifically designed by the US Dept of Defense for developing military applications was named Ada to honor her contributions towards computing

#### **A lesson that we all can learn from Babbage's Life**

Charles Babbage had huge difficulties raising money to fund his research

As a last resort, he designed a clever mathematical scheme along with Ada, the Countess of Lovelace

It was designed to increase their odds while gambling. They bet money on horse races to raise enough money to support their research experiments

Guess what happened at the end? They lost every penny that they had.

Fast

Bored

Storage

*Here is a fact:*

It could analyze up to 300 billion chess moves in three minutes

In 1997 Deep Blue, a supercomputer designed by IBM, beat Gary Kasparov, the World Chess Champion

That computer was exceptionally fast, did not get tired or bored. It just kept on **analyzing** the situation and kept on **searching** until it found the perfect move from its list of possible moves ...

#### **Goals for Today:**

To develop an appreciation about the capabilities of computing

To find about the structure & policies of this course

## CS101 Introduction to Computing

### 1.4 Course Contents & Structure

#### Course Objectives

To build an appreciation for the fundamental concepts in computing

To achieve a beginners proficiency in Web page development

To become familiar with popular PC productivity software

| Week | Lecture 1    | Lecture 2 | Lecture 3<br>Web Dev | Readings |    | Assignment |
|------|--------------|-----------|----------------------|----------|----|------------|
|      |              |           |                      | UC       | JS |            |
| 1    |              |           |                      |          |    |            |
| 2    |              |           |                      |          |    |            |
| 3    |              |           |                      |          |    |            |
| 4    |              |           |                      |          |    |            |
| 5    |              |           |                      |          |    |            |
| 6    |              |           |                      |          |    |            |
| 7    |              |           |                      |          |    |            |
| 8    | Midterm Exam |           |                      |          |    |            |
| 9    |              |           |                      |          |    |            |
| 10   |              |           |                      |          |    |            |
| 11   |              |           |                      |          |    |            |
| 12   |              |           |                      |          |    |            |
| 13   |              |           |                      |          |    |            |
| 14   |              |           |                      |          |    |            |
| 15   |              |           |                      |          |    |            |
|      | Finals Week  |           |                      |          |    |            |

### Fundamental concepts

Intro to computing

#### ***Evolution of computing***

Computer organization

Building a PC

#### ***Microprocessors***

Binary numbers & logic

Computer software

Operating systems

Application software

#### ***Algorithms***

Flowcharts

Programming languages

Development methodology

Design heuristics

Web design for usability

#### ***Computer networks***

Intro to the Internet

#### ***Internet services***

Graphics & animation

#### ***Intelligent systems***

Data management

#### ***Cyber crime***

Social implications

The computing profession

The future of computing

**Web page development****Web Development**

The World Wide Web  
Making a Web page  
Lists & tables  
Interactive forms  
Objective & methods  
Data types & operators

Flow control & loops Arrays  
Built-in functions  
User-defined functions  
Events handling  
String manipulation  
Images & graphics  
Programming methodology

**Productivity Applications**

Word processor  
Spreadsheet  
Presentation software  
Database

**Instructor:**

Altaf Khan  
cs101@vu.edu.pk

**Course Web Page:**

<http://vulms.vu.edu.pk/>

**Textbooks:**

UC - Understanding Computers (2000 ed.)  
JS - Learn JavaScript in a Weekend

**Reading Assignments**

Please make sure to read the assigned material for each week before the commencement of the corresponding week

Reading that material beforehand will help you greatly in absorbing with ease the matter discussed during the lecture

Check your e-mail often for announcements related to this and other VU courses

**Marks**

distribution ...

**Assignments (15%)**

Almost one every week, 13 in all  
No credit for late submissions  
The lowest 2 assignment grades will be dropped

**Midterm Exam (35%)**

During the 8th week  
Duration: One hour  
Will cover all material covered during the first seven weeks

**Final Exam (50%)**

During the 16th week  
Will cover the whole of the course with a slight emphasis on the material covered after the midterm exam

Duration: 2 hours

**First Assignment**

Send an email message to me at [altaf@vu.edu.pk](mailto:altaf@vu.edu.pk) with the subject “Assignment 1” giving me some information (in around 50 words) about what you see yourself doing ten years from now

Go to the CS101 message board and post a message (consisting of approx. 50 words) about how we could make the contents of this course more suitable for your individual needs. The subject for this message should be “Assignment 1”

Consult the CS101 syllabus for the submission deadline

### **A suggestion about unfamiliar terms**

We try not to use any new terms without explaining them first

However, it is not possible to do that all the time

If you encounter any unfamiliar terms during the lectures, please note them down and consult the GLOSSARY provided at the end of the “Understanding Computers” text book for their meaning

### **Let’s summarize the things that we have covered today?**

A few things about:

the very first digital computer & its inventor

the capability of modern computers

the structure and contents of CS101

### **In the Next Lecture ...**

We'll continue the story of the evolution of digital computers from the Analytical Engine onwards.

We'll discuss many of the key inventions and developments that have led to the shape of the current field of computing.

## Lecture 2

### Evolution of Computing

#### Today's Goal

To learn about the evolution of computing

To recount the important and key events

To identify some of the milestones in computer development

Babbage's Analytical Engine - 1833

Mechanical, digital, general-purpose

Was crank-driven

Could store instructions

Could perform mathematical calculations

Had the ability to print

Could punched cards as permanent memory

Invented by Joseph-Marie Jacquard

#### 2.1 Turing Machine – 1936

Introduced by Alan Turing in 1936, Turing machines are one of the key abstractions used in modern computability theory, the study of what computers can and cannot do. A Turing machine is a particularly simple kind of computer, one whose operations are limited to reading and writing symbols on a tape, or moving along the tape to the left or right. The tape is marked off into squares, each of which can be filled with at most one symbol. At any given point in its operation, the Turing machine can only read or write on one of these squares, the square located directly below its "read/write" head.

#### 2.2 The "Turing test"

A test proposed to determine if a computer has the ability to think. In 1950, Alan Turing (Turing, 1950) proposed a method for determining if machines can think. This method is known as The Turing Test.

The test is conducted with two people and a machine. One person plays the role of an interrogator and is in a separate room from the machine and the other person. The interrogator only knows the person and machine as A and B. The interrogator does not know which the person is and which the machine is. Using a teletype, the interrogator, can ask A and B any question he/she wishes. The aim of the interrogator is to determine which the person is and which the machine is. The aim of the machine is to fool the interrogator into thinking that it is a person. If the machine succeeds then we can conclude that machines can think.

#### 2.3 Vacuum Tube – 1904:

A vacuum tube is just that: a glass tube surrounding a vacuum (an area from which all gases has been removed). What makes it interesting is that when electrical contacts are put on the ends, you can get a current to flow though that vacuum.

A British scientist named John A. Fleming made a vacuum tube known today as a diode. Then the diode was known as a "valve,"

## 2.4 ABC – 1939

The Atanasoff-Berry Computer was the world's first electronic digital computer. It was built by John Vincent Atanasoff and Clifford Berry at Iowa State University during 1937-42. It incorporated several major innovations in computing including the use of binary arithmetic, regenerative memory, parallel processing, and separation of memory and computing functions.

## 2.5 Harvard Mark 1 – 1943:

Howard Aiken and Grace Hopper designed the MARK series of computers at Harvard University. The MARK series of computers began with the Mark I in 1944. Imagine a giant roomful of noisy, clicking metal parts, 55 feet long and 8 feet high. The 5-ton device contained almost 760,000 separate pieces. Used by the US Navy for gunnery and ballistic calculations, the Mark I was in operation until 1959.

The computer, controlled by pre-punched paper tape, could carry out addition, subtraction, multiplication, division and reference to previous results. It had special subroutines for logarithms and trigonometric functions and used 23 decimal place numbers. Data was stored and counted mechanically using 3000 decimal storage wheels, 1400 rotary dial switches, and 500 miles of wire. Its electromagnetic relays classified the machine as a relay computer. All output was displayed on an electric typewriter. By today's standards, the Mark I was slow, requiring 3-5 seconds for a multiplication operation

## 2.6 ENIAC – 1946:

ENIAC I (**E**lectrical **N**umerical **I**ntegrator **A**nd **C**alculator). The U.S. military sponsored their research; they needed a calculating device for writing artillery-firing tables (the settings used for different weapons under varied conditions for target accuracy).

John Mauchly was the chief consultant and J Presper Eckert was the chief engineer. Eckert was a graduate student studying at the Moore School when he met John Mauchly in 1943. It took the team about one year to design the ENIAC and 18 months and 500,000 tax dollars to build it.

The ENIAC contained 17,468 vacuum tubes, along with 70,000 resistors and 10,000 capacitors.

## 2.7 Transistor – 1947

The first transistor was invented at Bell Laboratories on December 16, 1947 by William Shockley. This was perhaps the most important electronics event of the 20th century, as it later made possible the integrated circuit and microprocessor that are the basis of modern electronics. Prior to the transistor the only alternative to its current regulation and switching functions (TRANSfer resISTOR) was the vacuum tubes, which could only be miniaturized to a certain extent, and wasted a lot of energy in the form of heat.

Compared to vacuum tubes, it offered:

smaller size

better reliability

lower power consumption

lower cost

## 2.8 Floppy Disk – 1950

Invented at the Imperial University in Tokyo by Yoshiro Nakamats

## 2.9 UNIVAC 1 – 1951

UNIVAC-1. The first commercially successful electronic computer, UNIVAC I, was also the first general purpose computer - designed to handle both numeric and textual information. It was designed by J. Presper Eckert and John Mauchly. The implementation of this machine marked the real beginning of the computer era.

Remington Rand delivered the first UNIVAC machine to the U.S. Bureau of Census in 1951. This machine used magnetic tape for input.

first successful commercial computer

design was derived from the ENIAC (same developers)

first client = U.S. Bureau of the Census

\$1 million

48 systems built

### 2.10 Compiler - 1952

Grace Murray Hopper an employee of Remington-Rand worked on the UNIVAC. She took up the concept of reusable software in her 1952 paper entitled "The Education of a Computer" and developed the first software that could translate symbols of higher computer languages into machine language. (Compiler)

### 2.11 ARPANET – 1969

The Advanced Research Projects Agency was formed with an emphasis towards research, and thus was not oriented only to a military product. The formation of this agency was part of the U.S. reaction to the then Soviet Union's launch of Sputnik in 1957. (ARPA draft, III-6). ARPA was assigned to research how to utilize their investment in computers via Command and Control Research (CCR). Dr. J.C.R. Licklider was chosen to head this effort.

Developed for the US DoD Advanced Research Projects Agency

60,000 computers connected for communication among research organizations and universities

### 2.12 Intel 4004 – 1971

The 4004 was the world's first universal microprocessor. In the late 1960s, many scientists had discussed the possibility of a computer on a chip, but nearly everyone felt that integrated circuit technology was not yet ready to support such a chip. Intel's Ted Hoff felt differently; he was the first person to recognize that the new silicon-gated MOS technology might make a single-chip CPU (central processing unit) possible.

Hoff and the Intel team developed such architecture with just over 2,300 transistors in an area of only 3 by 4 millimeters. With its 4-bit CPU, command register, decoder, decoding control, control monitoring of machine commands and interim register, the 4004 was one heck of a little invention. Today's 64-bit microprocessors are still based on similar designs, and the microprocessor is still the most complex mass-produced product ever with more than 5.5 million transistors performing hundreds of millions of calculations each second - numbers that are sure to be outdated fast.

### 2.13 Altair 8800 – 1975

By 1975 the market for the personal computer was demanding a product that did not require an electrical engineering background and thus the first mass produced and marketed personal computer (available both as a kit or assembled) was welcomed with open arms. Developers Edward Roberts, William Yates and Jim Bybee spent 1973-1974 to develop the MITS (Micro Instruments Telemetry Systems) Altair 8800. The price was \$375, contained 256 bytes of memory (not 256k), but had no keyboard, no display, and no auxiliary storage device. Later, Bill Gates and Paul Allen wrote their first product for the Altair -- a BASIC compiler (named after a planet on a *Star Trek* episode).
