

backend/api/documents.py Documentation (Roman Urdu)

Yeh AI Assistant ki "Library aur File Picker" ha jaha sy application PDF, Words, ya code formats ingest aur digest karti hy (AI Memory ma store).

File Ka Maqsad (Purpose)

User ky documents receive krna, RAG pipeline ko handle over dena (jo FAISS vector search krti h) aur documents ki management kly REST points dn.

Code Blocks aur API Endpoints ki Tafseel

1. POST /upload

- **Data Types:** HTML, CSV, Code (.py, .js), PDF waghera allow ha (SUPPORTED_EXTENSIONS).

Logic:

1. Uploaded file disk folder `uploads` pe save ki jti hai aik safe random address k sth.
2. Us file ka location `rag_pipeline.ingest_document()` path p send kia dta h jisay chotay chotay tukron (Chunks) mn todh kr vector embeddings m dal dta v.

2. GET /list aur DELETE /{document_id}

- **Kya karta hai?:** Workspace (Project folder) ke sarey files fetch krta ar User ksi document pe trash baten dabaye to background ma Vectors ar Db records sb sweep hojta.

3. POST /query

- **Kya karta hai?:** Hybrid Search! Sirf vector (semantic) meaning ni blkay normal keywords match krk top 5 chunks (paragraphs) highlight lata a aur uske source (index aur page no) extract kar k bhej taa hy. Frontend inhy Citations ky toor p interface p render karatta ha.

4. Workspaces Operations

- `POST /workspaces` / `GET /workspaces/list`: User mutadid folders/workspaces banaa ktta taki medical documents alag rhn r coding projects alag (AI confuused na ho).
