

backend/api/export_import.py Documentation (Roman Urdu)

Yeh file "Data Backup ar Restore" krne ka kam krti hai. Agar ap ek pc sy dosry main move krna chahtay hain apna sara Chat history, tou is file s endpoints lgtain hain.

File Ka Maqsad (Purpose)

SQL DB se data bundle kr k plain `.json` ban k pc pr download krana, aur wohi `.json` file le kar Database me dobara Inject karna bina system crush kye.

Code Blocks aur API Endpoints ki Tafseel

1. GET /conversations (Export)

- **Logic:** Ye SQLite db pr connection krky `conversations` table or uska chota tbl `messages` check krta ha. Saray chats ar `gup_shhap` array m convert hoty and "`solollm_conversations_2025xxx.json`" k nam sy HTTP connection header k zaryi download hoty hb.

2. POST /conversations/import (Import)

- **Logic:** JSON text prh k object ma lti h. `INSERT OR IGNORE` sqlite query lgati h k agr pehle sy mojud h record tu error denie ki bjyee bypass krr k naya record insert krdey.

3. Settings Import/Export

- `GET /settings`: Configuration file bhi ap export aur dousry pc ma import mar k environment ready kar sakty hien usi waqt!
