

Documentation (Roman Urdu)

Yeh file purry SoloLLM Setup ka aiham tareen feature "Fine-Tuning (Khud ki Training)" chalaati hy.

File Ka Maqsad (Purpose)

Jo bhee User nAI k sath baat cheet ki, ya document charhaye hain, is API s wo local computer pe us model ko "apny personal andaaz mein sikha/train" (Lora Adapters k sath) sakta. Ta'kh woh app k data ka expert baaan jyie bina internet kly!

Code Blocks aur Endpoints ki Tafseel

1. POST /api/training/start

- **Parameters Pydantic Model:** Model ka Nam (llama3), Lora Rank (adapter strength), Epochs (kidtni bar full data repeat prhna hv) pass hti hb.

Action Flow:

1. Pehlai Model support check (Ollama model Hf format map krta bb jise Mistral to HF url).
2. Extract aur format karta hb JsonL pr (data chunk block limit = 10 messages must).
3. `fine_tuner.start_training` asynch function ko call maart hy jo GPU pr background mein Heavy Weight training process run kr deti hh.

2. GET /api/training/status / POST /cancel

- **Kya karta hai?:** UI progress bar ko Loss (Ghalti rate), Val_loss aur Steps bataatta taa ha ta kk user ko maloom hosskey error kam hochuka hy. Aur cancel stop krta hs progress k.

3. Models Management (/models/register , /models/unregister)

- **Kya karta hai?:** Jub training pass ojati tu model adapter create houk ar folder mai bethy reht hz. Yeh function un files (Modelfile, Safetensors) ka pakage (blob) banakar wapis **Ollama k andar Install krr deyyt ha**, takhay normal chat page main bb nayia train shoda modek select hjhye ar istaml me asykky! Oh waaah!
