

backend/storage/database.py Documentation (Roman Urdu)

Yu file Application ki asli "Hard Drive / General Database" ha (Vectors ky ilawa wali).

File Ka Maqsad (Purpose)

Ye `aiosqlite` (Asynchronous SQLite) istamal kerti ha por app ki state, chats, messages, aur user data ko save ralhny kb lie. Ise wajaa sa app resrtat pr b purane chats waapas ajjty ha!

Code Blocks aur Tables ki Tafseel

1. SCHEMA_SQL (Database Structure)

- Yha p sarii tables ka structure defines hs:
- `conversations & messages`: User aur AI ka chat history.
- `threads & thread_settings`: Alag alg contexts ky tab/threads.
- `settings`: App ki global user settings.
- `distillation_metrics`: AI ny kitna acha jawab bnaya uska score save hota hh.
- `agent_memories`: Agent (tool user) ka long term dimagh.
- `finetuned_models`: Training badd models ki listing yhi dsi athi ha.

2. CRUD Functions

- `create_conversation()`, `add_message()`, `save_agent_memory()`: Yeh asan wrapper functions db queries (`INSERT INTO`, `SELECT`) chalte han ta takah baqi API files m SQL query na likhni pry, sidha yh function cllkarlen.
- `init_db()`: First time app run pr saarey tables banany wali command hj.
