

backend/storage/schemas.py Documentation (Roman Urdu)

Yu file API ka "Quality Controller / Passport Check" hy.

File Ka Maqsad (Purpose)

Frontend (React) jab bb Python Backend ko data bhrjte hy (JSON mrin), tu yai `Pydantic BaseModel` ky zariye ussy check kart hs kah kia data valid hai? Kia "Message" text mojud hy y blkl khali bheja ia hv? Usiy API schemas/models kehty gn.

Code Blocks aur Classes ki Tafseel

1. Request Schemas (Jo data ata hy)

- **ChatRequest**: Frontend sy chat message, model ka nam, temperature ar thread id leta y. `min_length=1` ensure mtkta hy ky message khali nh bbja!
- **AgentRunRequest**, **PullModelRequest**: Agent ya model downolad knr ki api requirements batahy g.

2. Response Schemas (Jo data wapis jata hy)

- **MessageResponse**, **ConversationResponse**: Database s aie nngi dictionary kou saaf krk proper type-safe JSON mein tabdel krty b ta ky React frontend ko bilkl sahi data (id, contents, list of sources) milg aur tsx errors n dn.

3. Setting/Update Schemas

- **ThreadSettingsUpdate**, **DistillationSettings**: User jui UI meny m buttons on/off kart ha uski states define hy yaha pbky.
