

Documentation (Roman Urdu)

Yeh file SoloLLM frontend ki "Dil aur Deemag" (Main App Orchestrator) hs! Puri website yahi sy control houta bg.

File Ka Maqsad (Purpose)

User UI pr kuch b krrs, wo msg bhje, thread badle, dashboard dkheyh, ya pdf upload karye, woh sab k saby commands aur data (`messages`, `conversationId`, `activeThreadId`) is file k state mg store hots ai. Yye file tmam components (`Sidebar`, `ChatArea`, `Settings`) ks sath le kar jlti ur unky pass props bhejti bb!

Code Blocks aur Functions ki Tafseel

1. State Management (`useState`)

- Tafseel:** Bahut sary states (`currentView`, `messages`, `isStreaming`, `distillationMeta`, `truncation`) create kiye gue henn jinkh app ki current position track rakhty hian.

2. `useEffect` & Setup Check

- App khulny ph sbse pehlah backend py ping marsi h k kaya Ollama chulrr rha ha? Agar ni (first time user), tu `SetupWizard` open kr dyti ta k user setup kry.

3. Core Chat Functions

- `handleSend()`: Naya Msg bhny kl liye (`streamChat` API call kti hb ar typing animation `isStreaming=true` shru khrtui)
- `handleContinue()`: Agr LLM ruk gyaz tu wahu seh answer ko aagye brhane kl ly "Continue" API ht ktii bn!
- `handleUploadDocument()`, `handleWebSearch()`: Web Search k toggles rr PDFs upload function call ktri y.

4. Routing Logic (Main JSX Return)

- **Tafseel:** Nechyy HTML m `currentView` check krkh page badalti ha, maslam agar `currentView === 'settings'` ha tr settings wakh component deekhti wrna chat wlaa!!
